

# Access Room Switch

## AI Overview

An access room switch can refer to either a network access switch connecting devices to a network or a room access control switch managing door entry and automation.

**Network Access Switch** A network access switch is a device at the edge of a local area network (LAN) that connects end-user devices such as computers, IP phones, Wi-Fi access points, cameras, and IoT devices to the broader network. It typically sits at the access layer of a hierarchical network, forwarding traffic upstream to distribution or core switches. Key features include:

- High port density:** Supports many devices simultaneously, often in 24- or 48-port models.
- Port diversity:** Offers 10/100/1000 Mbps Ethernet ports, and sometimes multi-gigabit ports for high-throughput devices.
- PoE support:** Powers devices like IP phones and access points directly through the network cable.
- Management:** Configurable via web UI or CLI, with VLAN, security, and QoS features.
- Scalability:** Can support stacking or expansion for future network growth.

When selecting a network access switch, consider the number and type of ports, uplink capacity (10G, 25G, or 40G), PoE requirements, security features (MAC filtering, 802.1X), and energy efficiency.

**Room Access Control Switch** A room access switch is used in security and building automation to control door access, alerts, and accessibility features. These switches are common in hotels, offices, and secure facilities. Features include:

- Functionality:** Momentary release, maintained release, time-delay, or emergency release.
- Style and interface:** Push buttons, touchless activators, illuminated buttons, mushroom buttons, or key-compatible switches.
- Integration:** Works with electronic locks, RFID, or Bluetooth systems for real-time room status updates, remote unlocking, and energy management.
- Flexibility:** Can be mounted remotely or directly at the door, supporting accessibility and automation needs.

Advanced systems like AccessFlex PRO provide two-way communication between reception and room locks, allowing staff to monit...
