

Adding a network segment to the core switch

Overview

Network segmentation with switches involves dividing a network into smaller, isolated segments to enhance security, improve performance, and simplify management. Learn how to configure a switch for network segmentation effectively by using VLANs, subnetting, and access control lists (ACLs). The network has a core switch on which there are SVIs for each of the vlans. I have been given the task of "segmenting" the. I'm at the start of a project, of which we are using consultants to help redesign our network - we're looking to simplify where possible and introduce some level of segmentation. The article offers detailed explanations of the technologies involved and demonstrates the configuration. The subnets used in this guide illustrate the process of creating and using them.
