

Construction unit s distribution box has multiple functions one switch for each purpose

Overview

Primary Distribution Box: Serves as the main distribution box for a construction site or project (usually only one). The distribution box (DB box) helps safely and efficiently distribute electrical power. A distribution box is a low-voltage electrical enclosure that receives incoming power and distributes it safely to multiple outgoing circuits through protective and switching devices such as MCBs, RCDs, RCBOs, fuses, isolators, busbars, neutral bars, earth bars, and surge protective devices. When a fault occurs on a single. The distribution box is an electrical equipment with the characteristics of small size, easy installation, special technical performance, fixed position, unique configuration function, no site restrictions, widespread application, stable and reliable operation, high space utilization rate, small.
