

Does the construction site s electrical distribution box have leakage protection

Overview

Main distribution box (level 1): 630A main circuit breaker, branch covering concrete mixer (30kW), crane (40kW) and other equipment, equipped with 150mA leakage protector and surge protection, incoming cable YJV-4×120mm². A construction power distribution box may also have earth leakage circuit breakers to ensure safety on the construction site. That is why E-abel designs temporary distribution boxes as complete outdoor power systems, not just painted. Leakage protection device, also known as leakage protector, refers to a device that can automatically disconnect the circuit or send out an alarm signal when the leakage current in the protected circuit reaches a predetermined value under certain conditions. Understanding and minimizing these risks is the basis for a safe workplace.
