

Fixed in wall-mounted distribution box

AI Overview

A wall-mounted fixed distribution box is an electrical enclosure installed on a wall to safely house circuit breakers, switches, and other control equipment for efficient power distribution.

Overview A wall-mounted distribution box is designed to be fixed directly onto a wall surface, providing a compact and accessible solution for electrical power distribution in homes, offices, and small commercial spaces. These boxes are typically made from metal (steel or aluminum) or high-grade plastic, offering durability, protection against dust, moisture, and accidental contact. Their elevated position keeps them away from water spills and foot traffic, making them safer and easier to access compared to floor-mounted units.

- Protection:** Many models offer IP54 environmental protection, ensuring resistance to dust and splashes of water, suitable for indoor installation.
- Mounting:** Fixed to walls with screws or brackets; some include a mounting plate for easy installation of internal components.
- Capacity:** Can house circuit breakers, switches, and other control devices; suitable for small to medium electrical loads.
- Accessibility:** Doors or panels allow easy access for maintenance, commissioning, or troubleshooting.

Applications

- Wall-mounted distribution boxes are ideal for:**
- Residential buildings:** Near main power entry points for safe distribution.
- Offices and small commercial spaces:** Where floor space is limited.
- Server rooms or control panels:** For organized and accessible power management.
- Industrial or automation setups:** When smaller, decentralized electrical distribution is required.
