

Grenada Outdoor High and Low Voltage Complete Set of Equipment

Overview

This prefabricated substation is a complete set of substation products reasonably combined with a booster transformer, high-voltage switchgear, low-voltage switchgear, power transformer, and other auxiliary equipment with the box body. The GGJ-type low-voltage distribution reactive power compensation integrated cabinet is a new-generation outdoor distribution cabinet designed based on the principles of safety, economy, rationality, and reliability. The role of the box transformer for wind power is to step up the 0.69KV electric energy generated by the wind turbine to 35kV, and then transmit it to the wind farm. KYN28 Metal clad central removable switchgear cabinet (hereinafter referred to as switchgear) is a three-phase AC 50Hz indoor distribution device, which is used to receive and distribute 3-12kV network.
