

How much does it cost to fireproof a network server rack

AI Overview

Fireproofing a network server rack typically costs between \$2,000 and \$15,000 per rack, depending on the level of protection and system complexity.

Fireproof Cabinets Fire-resistant server cabinets, such as the E190 or F-Cab Compact 90, provide up to 90 minutes of fire resistance and protect against heat, smoke, and dust. These cabinets often include features like controlled oxygen reduction, integrated fire suppression, and secure access locks. Prices for such cabinets generally range from \$2,000 to \$10,000 per rack, depending on size, fire rating, and additional features like monitoring systems and underfloor installation options.

Rack-Mounted Fire Suppression Systems For active fire suppression, rack-mounted systems like Redetec use clean agents such as NOVEC 1230 or FM200 to extinguish fires without damaging IT equipment. These systems detect fires within the rack and discharge a small amount of suppression agent, minimizing downtime and equipment loss. Installation costs for these systems typically start around \$1,500 to \$5,000 per rack, with higher-end solutions for larger or multi-zone setups costing more.

Factors Affecting Cost

- Rack Size and Units:** Larger racks or multiple racks increase material and installation costs.
- Fire Rating:** Higher fire resistance (e.g., 90 minutes vs. 60 minutes) increases cabinet cost.
- Suppression Agent Type:** Clean agents like NOVEC 1230 are more expensive than basic inert gas systems.
- Monitoring and Integration:** Systems with SNMP alerts, building management integration, or remote monitoring add to the cost.
- Installation Complexity:** Retrofitting existing racks is more expensive than installing new fireproof cabinets.

Summary

- Basic fireproof cabinet: \$2,000–\$5,000 per rack
- Advanced fireproof cabinet with integrated suppression: \$5,000–\$10,000 per rack
- Rack-mounted suppression system only: \$1,500–\$5,000 per rack
- Large-scale or...
