

How to connect a NAC6300 to a switch cable

Overview

There is a single serial console port on the switch, using a USB Type-C connector. Use a common USB to USB-C cable (must be data capable). You'll need one cable to connect your ethernet switch and router together (assuming you want to provide your devices with an ethernet connection to the internet), and an additional cable for each device you want to. For example: switch> The CLI prompt indicates the current command context. If both cables are plugged in, the console output is echoed to both the RJ-45. It covers debug logging, log rotation, switch system and hardware commands, cable diagnostics, supportability copy, traceroute, ping, troubleshooting, remote syslog, runtime diagnostics, service OS, in-system programming, selftest, and zeroization. Start the terminal emulation session. A USB-A Bluetooth adapter (separately orderable, SKU# S1H23A) is available to provide an alternative way.
