

How to open the fiber optic box in your home

Overview

That's an ONT cover (box) not the ONT itself, that is behind the right hand cover inside which is secured with a screw, the side you can access is not screwed shut, simply lift the tab (may be tight but you shouldn't break it). Installing a fiber wall socket (also called an FTTH outlet or optical termination point) is critical for maximizing your fiber internet speed and reliability. While ISPs often handle this, DIY installation can save time and money—if done correctly. Either way you're going to break it, there is a tab on one of the sides you can use a small screw driver or your finger nail, comes off pretty easy, but I do it for a living. It ensures a clean, stable interface between the ISP's fiber network and your router—impacting speed, latency.
