

Huawei 5800 optical module inspection

Overview

Before using an optical time-domain reflectometer (OTDR) to test the connectivity or the attenuation of optical signals, disconnect the optical fibers from the optical module. Otherwise, the optical module will be burnt. This practice is due to the lack of testing facilities and technical expertise, leading to potential issues with GPON boards that customers receive, such as malfunctioning boards, software version incompatibilities (GPHF/GPSF and MPLA), and abnormal transmission power in GPON modules. To mitigate, view and download Ma5800 manuals for free. Manuals and User Guides for Huawei CloudEngine 5800 Series. Checking transceiver parameters allows users to monitor real-time operating status and locate link faults rapidly.
