

Huijue s AI server in Iraq for several consecutive years

AI Overview

There is no confirmed public information that Huijue has operated AI servers in Iraq for several consecutive years. Huijue Group is a Chinese company specializing in AI-driven energy optimization, particularly in data centers and industrial energy management. Their AI systems use intelligent algorithms to adjust equipment parameters in real time, significantly reducing energy consumption. For example, Huijue's AI tuning technology has lowered the Power Usage Effectiveness (PUE) of data centers from 1.73 to 1.56, and in ongoing projects, PUE values are expected to drop below 1.3, saving millions of kilowatt-hours annually. The company also employs an Energy Management Contract (EMC) model, which ties financial returns to achieved energy savings, promoting efficient and sustainable operations. In Iraq, the AI landscape is evolving rapidly. The country has launched its National Strategy for Artificial Intelligence (INSAIN), aiming to integrate AI into healthcare, education, environmental protection, agriculture, and tourism. Iraq has also established cybersecurity and AI-focused directorates, developed AI curricula for universities, and invested in infrastructure to support AI adoption. Despite these efforts, Iraq faces challenges such as outdated digital infrastructure, electricity shortages, and limited high-performance computing resources, which could affect the deployment of foreign AI servers. While Huijue's AI technology is well-suited for energy-intensive environments like data centers, there is no publicly available evidence confirming that Huijue has maintained AI servers in Iraq over multiple years. Any potential deployment would likely require addressing Iraq's infrastructure limitations, including electricity reliability and network stability, to ensure consistent operation. In summary, Huijue's AI capabilities are proven in energy optimization, but their prese...
