

Installation price of dual power distribution box

AI Overview

The cost of a dual power distribution box typically ranges from \$500 to over \$2,000 depending on capacity, features, and application.

Overview Dual power distribution boxes are designed to manage electricity from two sources, such as a solar system and the main grid, often including automatic transfer switches (ATS), surge protection, and voltage regulation. These units are essential for ensuring uninterrupted power supply and safe distribution to a main panel or multiple circuits.

Price Range

- Residential or small-scale units:** Basic dual power boxes with lower amperage (e.g., 100A) and standard protection features generally cost \$500–\$1,000.
- Commercial or industrial units:** Higher-capacity boxes with advanced features, such as integrated monitoring, multiple circuits, and heavy-duty enclosures, can range from \$1,500 to \$2,500 or more.
- Portable or temporary units:** Units designed for outdoor or event use, with adjustable breakers and weather-resistant enclosures, may also fall within this range depending on amperage and environmental ratings.

Factors Affecting Cost

- Amperage and Voltage Capacity:** Higher-rated units for industrial applications cost more due to larger components and enhanced safety features.
- Automatic Transfer Switch (ATS):** Boxes with ATS functionality, which automatically switch between power sources, add to the price.
- Surge and Voltage Protection:** Integrated surge protection and voltage regulators increase upfront costs but improve long-term reliability.
- Construction and Environmental Rating:** Weather-resistant or NEMA-rated enclosures for outdoor use are more expensive than indoor-rated units.
- Customization and Monitoring:** Options like digital displays, remote monitoring, and integration with building management systems can significantly influence pricing.
