

Ls Multimode fiber

Overview

Our multimode fibers can transport light in a wide angular range and are therefore particularly well suited for our fiber-coupled light sources LS-WL, LS-BB1 and LS-MC1, which offer light with a numerical aperture of 0.5 and bring out the maximum in optical performance. They have excellent transmission in the wavelength range 300 - 1200nm. Request now! The fibers are equipped with an. Multimode fiber is a common choice to achieve 10 Gbit/s speed over distances required by LAN enterprise and data center applications. With so. Choosing between single mode and multimode fiber is a common decision when designing, deploying, or upgrading fiber optic networks. Although both carry data through light signals, they differ significantly in transmission mechanism, bandwidth-distance capability, deployment cost, and typical. LS optical fiber cables are produced in Korea. Multi-mode links can be used for data rates up to 800 Gbit/s. LS Tower, 127 LS-ro, Dongan-gu.
