

# Main power switch of distribution box sdyc

## Overview

The main switch, or main breaker, controls the entire electrical supply to the distribution box. It's typically rated for the maximum current capacity of the electrical. Electrical distribution boxes are used in commercial and residential buildings and are part of the electrical system, also known as switchboards. A distribution box, also known as a distribution board, electrical panel, or breaker box, is an enclosure that houses electrical components responsible for distributing electricity throughout a building. It receives power from the main electrical supply and divides it into separate circuits, each. Incoming main fuses, cutouts, switches, and main/tie breakers. Power transformers (kVA rating, voltage rating, winding connection and grounding means, % impedance, cooling type).
