

Om3 fiber optic supports 10G

Overview

Yes, OM3 (Optical Multimode 3) fiber optic cable is capable of supporting 10 Gigabit Ethernet (10G) transmissions. The OM2 fiber type of multimode was standardized in 1998. The bandwidth specification and OM3 cables cover a range extending up to 2000MHz km. While OM3 has long been considered the standard for 10-gigabit multimode deployments, OM4 was introduced to support higher bandwidth applications and longer link distances, making it a preferred option in many modern data centers. OM3 is a type of multimode fiber (MMF) that is commonly used for short to medium-distance data communication in local area networks (LANs), data centers, and other high-performance. Multimode fiber is a common choice to achieve 10 Gbit/s speed over distances required by LAN enterprise and data center applications.
