

Outdoor power distribution box installation price

AI Overview

The total cost for an outdoor complete power distribution box typically ranges from \$3,000 to \$6,000, depending on amperage, enclosure type, and installation complexity.

Cost Breakdown

Equipment Costs: Outdoor-rated distribution boxes are generally more expensive than indoor units due to weather-resistant construction, durable materials, and safety features. A 200A outdoor panel with a new meter socket can cost between \$1,500 and \$3,500 for the box and breakers alone, while smaller 100-125A units may range from \$800 to \$1,500. Advanced features like smart monitoring, lockable covers, or integration with building management systems can further increase the price.

Labor Costs: Installation typically requires 6-18 hours of electrician work, depending on the complexity of wiring, accessibility, and whether conduit rerouting or structural modifications are needed. Hourly rates for licensed electricians range from \$75 to \$120, with potential surcharges for rural locations, overtime, or difficult access. Outdoor installations may require additional mounting hardware or pole/wall supports, adding to labor time.

Permits and Additional Fees: Local electrical permits are often required, which can add \$50-\$200 depending on jurisdiction. Urban areas may also include delivery or permit surcharges, while rural areas may incur transport fees for specialized panels.

Factors Affecting Price

Amperage and Number of Circuits: Higher amperage panels (200A+) and multi-circuit setups increase both material and labor costs.

Outdoor Rating: Weatherproof enclosures, UV-resistant materials, and lockable covers add to the upfront cost.

Installation Complexity: Long conduit runs, concrete wall mounting, or replacement of old wiring can increase labor hours and material costs by 15-30%.

Smart Features: Panels with digital displays, remote monitoring, or energy management capabilities...
