

Power switches for distribution network automation equipment

Overview

Distributor assembly switches, also known as power distribution blocks or busbar trunking systems, are critical components in electrical power distribution networks. These devices are designed to safely and efficiently distribute electrical power from a main source to multiple branch circuits. They. Distribution automation (DA) is a family of technologies, including sensors, processors, information and communication networks, and switches, through which a utility can collect, automate, analyze, and optimize data to improve the operational efficiency of its distribution power system. Ensure an efficient, stable, secure and sustainable power supply and. This This paper introduces the current technical situation of intelligent switch equipment for distribution, compares different intelligent switch schemes, analyzes the problems and causes of intelligent switch with low integration degree, puts forward the technical scheme of integrated design of. The switch family consists of a complete range of switch-disconnectors, switch fuses, transfer switches, bypass switches and fuses.
