

Price of complete sets of household electrical distribution box components

AI Overview

A complete household electrical distribution box assembly typically costs between \$1,200 and \$6,500, depending on panel size, amperage, installation complexity, and regional factors.

Typical Cost Ranges

- For a standard residential setup, the total cost—including the panel enclosure, breakers, wiring, labor, and permits—varies widely:
- Basic 100–125A indoor panel replacement: \$1,200–\$2,500, suitable for single-family homes with straightforward wiring and minimal rerouting.
- Mid-range 150–200A upgrade with minor relocation or additional circuits: \$2,250–\$5,000, including materials, labor, and permits.
- Premium 200–400A service with multiple subpanels, meter base relocation, or extensive rewiring: \$5,000–\$11,000, covering high-capacity systems and complex installations.

Factors Affecting Price

- Panel Amperage and Size:** Higher amperage panels (200A or more) cost more due to larger enclosures, additional breakers, and higher-capacity wiring.
- Indoor vs Outdoor Installation:** Weatherproof outdoor panels carry a premium over standard indoor units.
- Labor and Installation Complexity:** Labor rates vary regionally (\$60–\$120 per hour), and complex wiring, rerouting, or subpanel installation increases total cost.
- Permits and Inspections:** Local code compliance and required permits can add \$50–\$1,000 depending on project scope.
- Additional Features:** Smart monitoring, energy management, or integration with building systems can increase upfront costs but may offer long-term savings.

Components Included

A complete household distribution box assembly generally includes:

- Main panel enclosure
- Circuit breakers for each branch circuit
- Wiring and bus bars
- Main disconnect switch
- Optional meter socket or subpanels

Installation labor and permits

Summary

For a typical single-family home, homeowners can expect to pay \$1,200–\$2,500 for a basic 100–125A panel, \$2,250–...
