

Price of electrical distribution boxes for self-built houses

AI Overview

Installing electrical distribution boxes in a new house typically costs between \$200 and \$600 per box, including materials and labor, depending on size, type, and complexity.

Material Costs The price of the distribution box itself varies widely based on size, material, and features. Standard residential boxes range from \$25 to \$180 for basic single-gang or multi-gang metal or plastic boxes, while larger or specialized boxes with surge protection, weatherproofing, or multiple circuits can cost more. Outdoor-rated or weather-resistant enclosures generally carry a premium compared to indoor units. Advanced features like smart monitoring or integration with building management systems can further increase the upfront cost.

Labor Costs Labor is a significant portion of the total cost. Electricians typically charge \$85 to \$125 per hour, with installation of a standard box taking 1-2 hours depending on accessibility and wiring complexity. For larger multi-gang setups or feed-through boxes with additional breakers, labor time increases, raising total costs. Regional variations and wall types (e.g., concrete vs drywall) can add 15-30% to labor expenses.

Total Installation Cost For a typical residential installation: Single-gang box: \$60-\$180 for materials plus \$85-\$125 per hour for labor. Multi-gang or feed-through box: \$200-\$600 plus labor, depending on complexity and additional features. Full house wiring with multiple distribution boxes: Costs scale with the number of boxes, wiring runs, and any specialized requirements, potentially reaching several thousand dollars for a complete electrical system.

Factors Affecting Cost Box type and size: Larger or multi-gang boxes cost more. Material: Metal boxes are more durable and fire-resistant than plastic, but more expensive. Installation environment: Outdoor, wet, or hard-to-access locations increase labor and material costs. Code compliance and safety feat...
