

Several categories of trademark registration for cable trays

AI Overview

Cable trays are typically classified under Class 9 for electrical and scientific apparatus or Class 6 for metal building materials, depending on their material and use. Trademark Classes Overview Trademarks in the United States and internationally are organized into 45 classes: 34 for goods and 11 for services . The Nice Classification (NCL) is the international system used to categorize goods and services for trademark registration . Each class groups similar types of products to avoid confusion and streamline registration. Relevant Classes for Cable Trays Class 9 - Electrical and Scientific Apparatus Covers electrical equipment, wiring, and apparatus for conducting electricity. Cable trays used to support and route electrical wiring in buildings or industrial installations often fall under this class because they are part of electrical distribution systems . Class 6 - Common Metals and Metal Building Materials Includes metal structures, building materials, and hardware. If the cable trays are primarily metallic and sold as construction hardware, they may also be registered under Class 6 . Other Considerations If the cable trays are part of a software-controlled or smart electrical system, Class 9 may be more appropriate due to the electrical and technological aspect . For installation or maintenance services related to cable trays, Class 37 (construction and installation services) could be relevant, though this applies to service marks rather than goods . Practical Steps for Trademark Registration Search Existing Trademarks: Use the USPTO Trademark Electronic Search System (TESS) or WIPO Global Brand Database to check for similar marks in the relevant class . Select the Correct Class: Determine whether the product is primarily a metal building material or an electrical apparatus. Some applications may include multiple classes if the product spans categories. File the Application: Submit the tra...
