

Temporary protective optical cable across the road

Overview

The most effective solution for these temporary or semi-permanent runs is the use of specialized cord ramps or protectors, which are engineered to cover and protect the cable while creating a smooth transition across the surface. Prioritize safety and prevent accidents by protecting electrical cords over roadways. Choose the right protective cover, install it properly, and maintain it regularly to create a safe working environment. Protecting electrical cords over roadways is crucial for preventing tripping hazards, damage. Lex Products PowerRAMP® crossovers protect hoses and cables from pedestrian or vehicle traffic damage where they run across roads, parking lots, sidewalks and pathways. Through the use of non-conductive materials, exclusive tread designs and heavy-duty polyurethane construction PowerRAMP® provides. Put the proven Brahman Systems to work for you to improve safety, security and eliminate the cost and labor of burying cables, wires and hoses underground, stringing lines overhead or inconveniently directing traffic away from potentially dangerous high-pressure lines or electrical wire. Outdoor cord runs are subject to unique stresses, including weather, foot traffic, and UV exposure, which can quickly degrade standard electrical. Outdoor cable protectors are specialized pieces of equipment designed to safeguard temporary wiring, hoses, and cables laid across pathways or roadways from mechanical damage and environmental exposure.
