

The core switch can be configured with 1x

Overview

To start, enable dot1x globally. Next, specify the RADIUS servers which will perform the authentication and authorization. The device can combine the function of a router, switch, and access point, depending on the fixed configuration or installed modules. The switch. basically after you have configured the stack, you can manage it as if it were a single device, as you can read from the document, both devices are responsible for traffic forwarding (Data Plane), but only the Master switch manages the control plane You can configure the stack as L2 or L3 device. In this scenario, IP addresses of the interfaces connecting the core switch to the BRASs and firewalls and OSPF need to be configured on the core switch, so as to implement connectivity between the user network to egress network through the core switch. When configuring interfaces and routes, you. This product includes code licensed under certain open source licenses which require source compliance. The port changes to the spanning-tree forwarding state and it can send packets to the host but cannot receive packets from the host until the authentication process has been completed.
