

View the list of IP addresses assigned to the core switches

Overview

To get a detailed listing of all the IP-related characteristics of an interface, use the `show ip interface` command. A common use for this command is to view any secondary addresses that have been assigned to an interface (they do not show up in the standard `show` . These commands give you general details about your switch, like the software it is running, how long it has been powered on, and what hardware is installed. `show version` Shows the current active configuration that is. This article provides a comprehensive guide to locating IP addresses associated with Cisco switches, covering various methods and utilizing relevant command-line interface (CLI) commands. We'll assume a basic understanding of networking concepts, including IP addressing, subnetting, and VLANs. In this figure, you can find a Core Switch and two Access switches connected to it. If there comes a situation where I need to know the IP addresses of the devices connected to either Switch A or B, what would be the. Is there a way I can find the list of IP addresses connected to a switch (may be Unix command), so that I can visit each desk, run a command, and check all the active IP addresses (computers) connected to that switch, and based on that I can find out to which switch that specific IP address is. I am needing help with commands I can run to get a list of ALL IP's and their associated ports from the CLI. Any help would be greatly appreciated.
