

Waterproof charging for outdoor power distribution boxes

AI Overview

IP65-IP68 waterproof distribution boxes provide safe, reliable outdoor charging and power distribution, protecting electrical components from water, dust, and UV exposure.

Key Features

- Ingress Protection (IP) Ratings:** Outdoor power distribution boxes designed for waterproof charging typically have IP65 to IP68 ratings, ensuring protection against rain, dust, and even temporary submersion in water. IP65 is sufficient for heavy rain and dust, while IP66-IP68 offers higher resistance for harsher conditions.
- Materials and Durability:** Boxes are commonly made from ABS, polycarbonate, fiberglass, or sheet metal, offering impact resistance, UV stability, and corrosion resistance. UV-stabilized plastics prevent yellowing and cracking in sunlight, while metal enclosures provide extra security and durability in industrial or coastal environments.
- Safety Features:** Many outdoor boxes include circuit breakers, leakage protection, and lockable covers to prevent overloads, tampering, or accidental contact. Stainless steel latches and combination locks enhance security, especially in public or shared spaces.
- Compatibility and Sizing:** Boxes come in various sizes to accommodate different chargers, power cords, or electrical components. Some models offer DIN rail configurations for modular installation, while others provide pre-drilled holes for EV chargers, RV power cords, or temporary event setups.
- Installation Flexibility:** Waterproof boxes can be wall-mounted, post-mounted, or portable, making them suitable for residential, commercial, or industrial outdoor applications. Lightweight options like fiberglass or ABS are easy to move, while heavier metal boxes offer permanent, secure installations.

Applications

- EV Charging:** Protects home or public EV chargers from rain, snow, and dust, extending equipment life.
- RV and Camping:** Enables safe charging of camper batteries and outdoor appliances.
