

What type of cable is used in the mobile power distribution box

AI Overview

Mobile power distribution boxes require robust, flexible, and appropriately rated cables, often customized with connectors like Powerlock, CEE, or Socapex for safe temporary installations. Types of Cables Extension and power cables for mobile PDUs are designed to handle high currents and harsh environments. Common types include:

- H07RN-F cables:** Flexible rubber-insulated cables suitable for outdoor and industrial use, available in single-core or multicore configurations such as 1x16mm², 3G1.5mm², or 3G2.5mm², often used for temporary installations.
- PVC-insulated power cables:** Suitable for indoor and outdoor installations, resistant to UV, chemicals, and mechanical stress, and can be laid underground or in cable ducts.
- Multicore cables:** For complex connections, such as 19-pin Socapex cables, commonly used in entertainment and stage lighting applications.

Connectors and Compatibility Cables must match the connectors on the distribution boxes:

- Powerlock connectors:** High-current connections up to 630A, often used with Powersafe or similar mobile distribution boxes.
- CEE industrial plugs and sockets:** Rated from 16A to 125A, suitable for portable rubber power distribution boxes.
- Socapex connectors:** 19-pin connectors for multicore cables, widely used in film, television, and stage lighting.

Customization and Safety For temporary or field setups, custom cable assemblies are recommended:

- Length and cross-section:** Cables can be manufactured to exact lengths and optimal cross-sections to minimize voltage drop and ensure safety.
- Marking and identification:** Custom labeling on cables helps with organization and reduces connection errors.
- Environmental protection:** Weather-resistant, waterproof, and corrosion-resistant cables are essential for outdoor or extreme conditions, as seen in systems like MEPDIS-R.

Practical Considerations Ensure the cable rating mat...
