

Xiaomi Router 4 Direct Connection to Fiber Optic Fiber

AI Overview

The Xiaomi Router 4 cannot connect directly to a fiber optic cable; it requires an Optical Network Terminal (ONT) to convert the fiber signal to Ethernet. Understanding the Setup Fiber optic internet transmits data as light pulses, which standard routers cannot interpret directly. The Mi Router 4 features a gigabit WAN port and dual-band Wi-Fi, but it does not have an SFP or fiber input port, meaning it cannot accept a fiber cable directly. To use fiber internet, you need an ONT, typically provided by your ISP, which converts the optical signal into an electrical Ethernet signal compatible with your router.

Step-by-Step Connection

- Install the ONT
- Locate the fiber wall outlet where your ISP's fiber line enters your home.
- Connect the fiber optic cable to the ONT's optical port.
- Power on the ONT and wait for the status lights to stabilize (usually 2-5 minutes).
- Connect the ONT to the Xiaomi Router 4
- Use a high-quality Ethernet cable (Cat5e or Cat6) to link the ONT's LAN port to the WAN port on the Mi Router 4.
- Power on the router and wait for the indicator lights to confirm a successful connection.
- Configure the Router
- Access the router's admin panel via a browser (typically 192.168.31.1).
- Enter ISP credentials if required.
- Enable dual-band integration for optimal Wi-Fi performance.
- Test the Connection
- Connect a device via Wi-Fi or Ethernet and verify internet access.
- Run a speed test to ensure you are achieving the expected fiber speeds.

Notes on Direct Fiber-Ready Routers

Some advanced Xiaomi models, like the Be5000, include a 2.5Gbps WAN port designed for direct fiber connections, but the Mi Router 4 does not support this feature. Therefore, for the Mi Router 4, the ONT is mandatory.

Tips for Optimal Performance

- Place the ONT and router in a dry, ventilated area near power outlets.
- Use quality Ethernet cables to avoid speed loss.
- Keep the fiber cable straight and avoid bending to prevent signal d...
